

MEDICAL & REHABILITATION EQUIPMENT

HANDREACHERS

A design for the handicapped and for everyone having difficulty in bending.

The handreachers are available in three sizes, long, medium and folding, which folds to 32cm for storage in a handy holster when travel or not in use.

They are strong, lightweight with an aluminium shaft and terylene cord. The handgrip, trigger and jaw are made of ABS plastic.

A hooked trigger enables the handreacher to be hung on peg or over wheelchair. A PVC plastic grip and a magnet set in the tip enable the handreacher to be used for many different purposes from dressing and objects of various sizes and shapes to picking up tiny metallic things such as pins, needles, screws etc.

MODEL	SIZE	LENGTH	WEIGHT
K-HR1	Long	83cm	0.21kg
